Freeport McMoRan Climate Change Strategies

Freeport-McMoRan's climate strategy pillars include reduction, resilience, and contribution. Our goal is to reduce greenhouse gas emission intensity in the Americas by 15% per metric ton of copper cathode by 2030 from our 2018 baseline. We aspire to participate and positively contribute to a 2050 net zero economy.

At Freeport we are working to enhance our resilience to both physical and transitional risks associated with climate change for our operations, our host communities, and our stakeholders. This includes working to analyze and prepare for extreme weather events, water stress and other climate change impacts. Following completion of a recently completed physical climate risk analysis, we identified four main themes that we aim to integrate into our climate resiliency strategy going forward. These include: wet extremes, heat extremes, emerging water stress, and sea level rise. At present, we plan to focus our attention on those regions and risk factors that have emerged as highest priority from this initial screening assessment of physical climate risks. These include coastal flooding analysis and precipitation analysis at all operating sites to help inform our designs, decision making and collaboration with stakeholders. We will also continue working closely with host communities to help support and enhance their resilience to potential physical risks related to climate change. Visit [Freeport-McMoRan Inc. \(fcx.com\)](#) to learn more about our 2020 climate report and strategies.

Sierrita Operational Work Strategy:

- Employee Count: 1,160
 - Vacancies: 115
 - Contractor average: 185
- Advanced Analytics + TROI – focus on process efficiencies

Tailings Management:

- Pipe lift was completed in Q4 of 2021
 - Berm push on north dam will start in Q2
 - New pipe will be installed

- Erosion repairs on lower benches ongoing from monsoon season

Parcel 30 Voluntary Remediation Program:

- Historic Eagle Picher mill facility
- Operated 1943 – 1959
- Enrolled in the ADEQ Voluntary Remediation Program
- Collaborating with Town of Sahuarita on reclamation work and post-reclamation use
- Approximately 80 acres with approximately 46 acres of reclamation
- Planned alternate land use is open space with some recreation trails and STEM focus area
- Construction start anticipated May 2022 with completion estimated by December 2022

Environmental Update

- Two additional MO wells
- Decrease use of freshwater at Canoa Ranch
- Enhances sulfate removal
- Community notifications before work begins
 - Work may begin in Q2
- Anticipate 6 weeks/well
 - some 24-hour work
- Noise and lighting concerns: sound walls and light plant adjustments
- Additional engineering and site work before and after well installation

Community Engagement / Development Update
